## Web Site Page Views per Day

Spike on May 2, 2010 is associated with flooding in North Mississippi.

## DATA KEY

**Incident Management** data is derived from a newly developed database specifically designed to allow operators to track the detailed location and the exact time that first responders arrive on scene of traffic incidents on Mississippi freeways.

**Traveler Information** statistics demonstrate the data sent by Mississippi Traffic Management Center control room operators to the [www.mstraffic.com](http://www.mstraffic.com) website. Page views are the actual number of times that the public retrieves traffic information.

## May 2010 Mississippi TMC Performance Measures

2 of 2

The Mississippi Department of Transportation is responsible for providing a safe intermodal transportation network that is planned, designed, constructed and maintained in an effective, cost efficient, and environmentally sensitive manner.
